Installation Guide For Divi UI or Section Module Packs

https://divi-hub.divi-marketplace.com/installation-guide-for-divi-ui-or-section-module-pack/

Requirements:

In order to successfully run ‘ Our Divi Layouts ‘ on your website your server environment will have to meet certain PHP and WordPress minimal version requirements.

Essentials:

-**PHP 5.4.X or higher**
-In order to install our Child theme or Layouts, you must first Purchase **Elegant themes Membership** and Download Divi theme.
-This Divi Layouts is fully compatible with **Divi v5+,** just make sure that you’ve installed the latest version of Divi theme.

Installation Guide :

Step 1:

Download the Product Zip & Extract the .zip which consists of Supplementary & Product Folder. It consist of Product Files & other files needed like installation guide,license.txt etc.

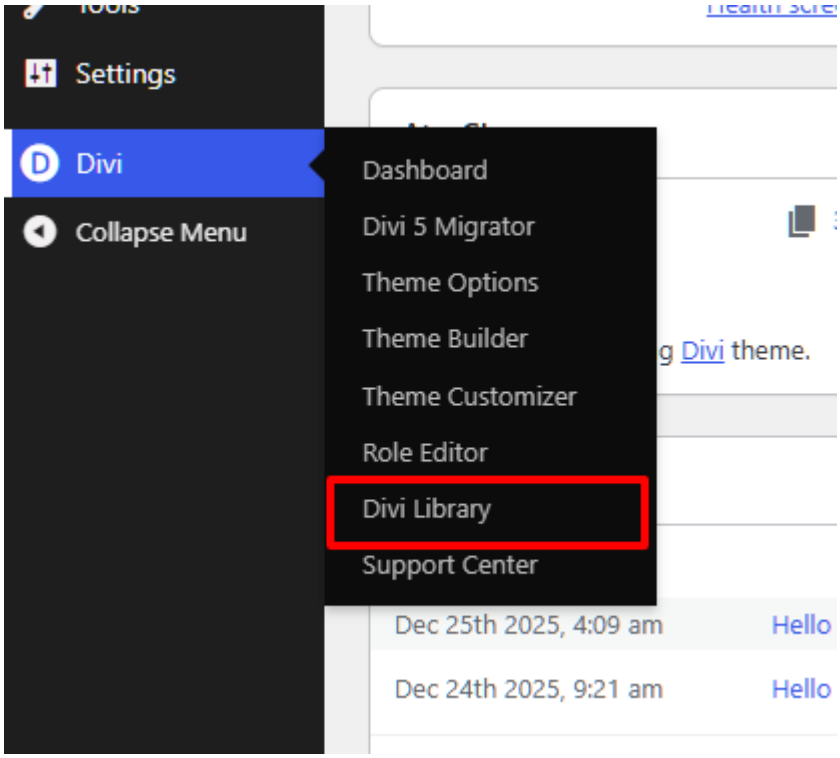

For example in screenshot below it show ‘ Testimonial Module Pack ‘ Folder

Note :- You need import ‘ All_Styles ‘ under ‘ Divi Library ‘ to import all styles in one shot.

Supplementary folder also contain individual json to import individual styles if you prefer.

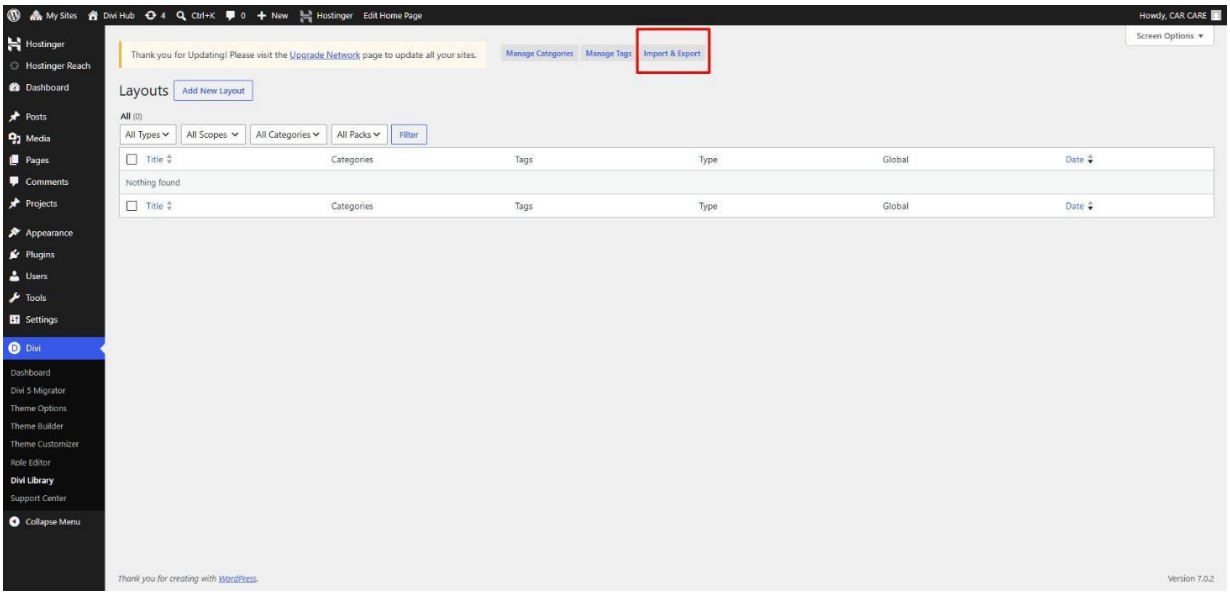

Step 2:

Login to wp-admin(WordPress Dashboard) and Navigate to Divi > Divi Library.

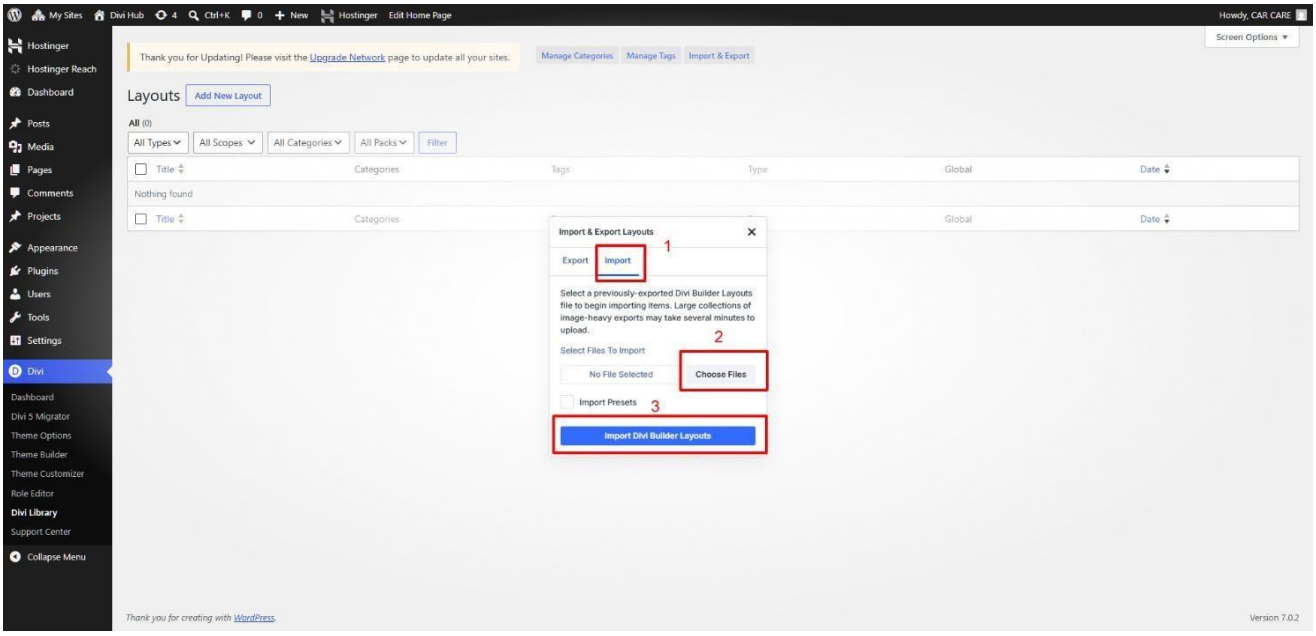

Step 3:

Now at the **Topbar** of the WordPress Dashboard click on **Import and Export button.**

Step 4:

In **Portability Popup** click on **Import Tab & choose All Style JSON** file from Product Folder then hit on **Import Divi Builder Layouts.**

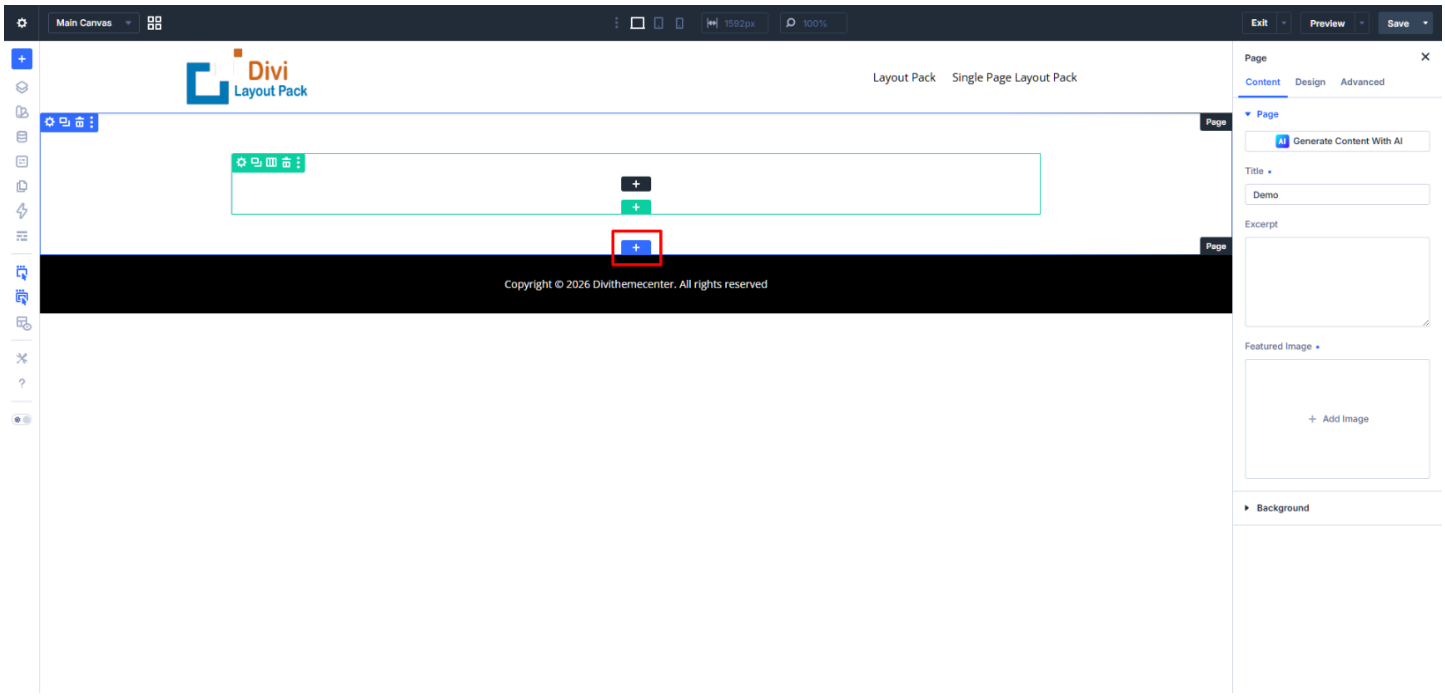

Step 5:

Wait for the installation to complete & then you will see all the JSON styles imported. Now to use this style Create a **New Page** or **Edit the Existing** page **Using DIVI Builder**.

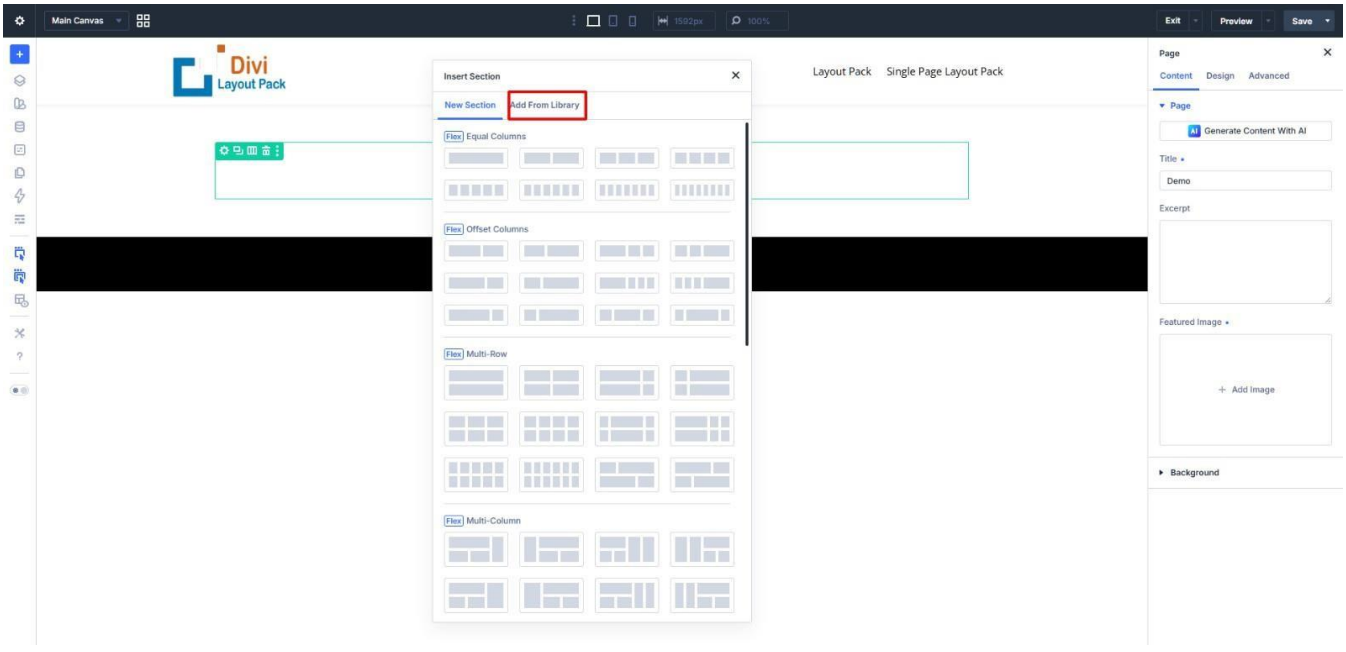

Step 6:

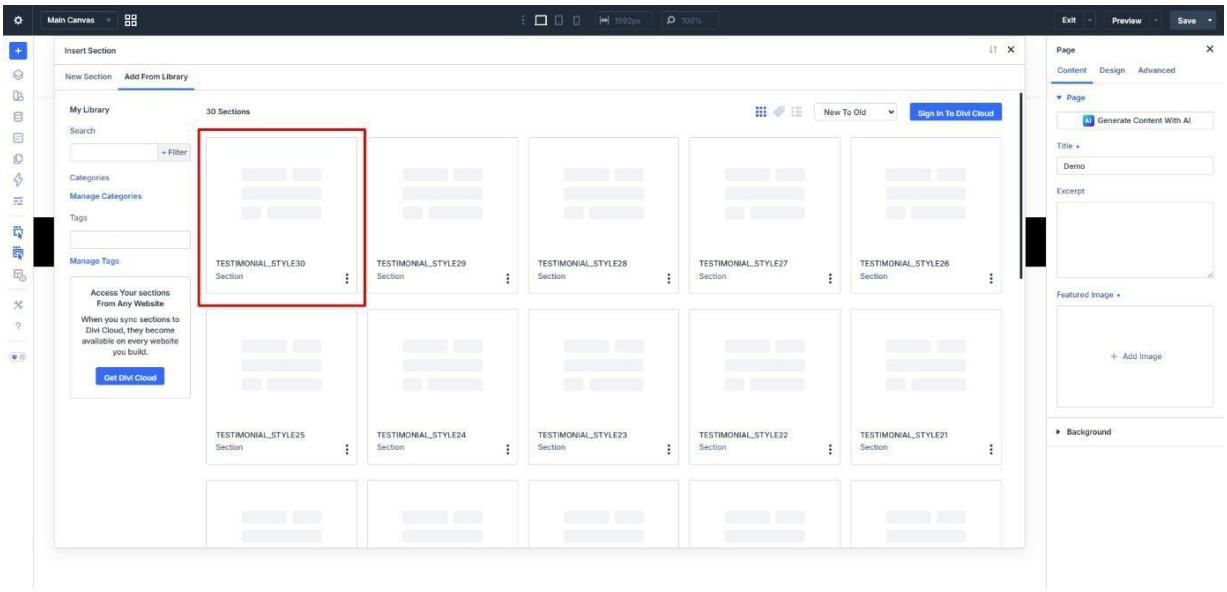

Click on **Add New Section** on your Page to insert a section.

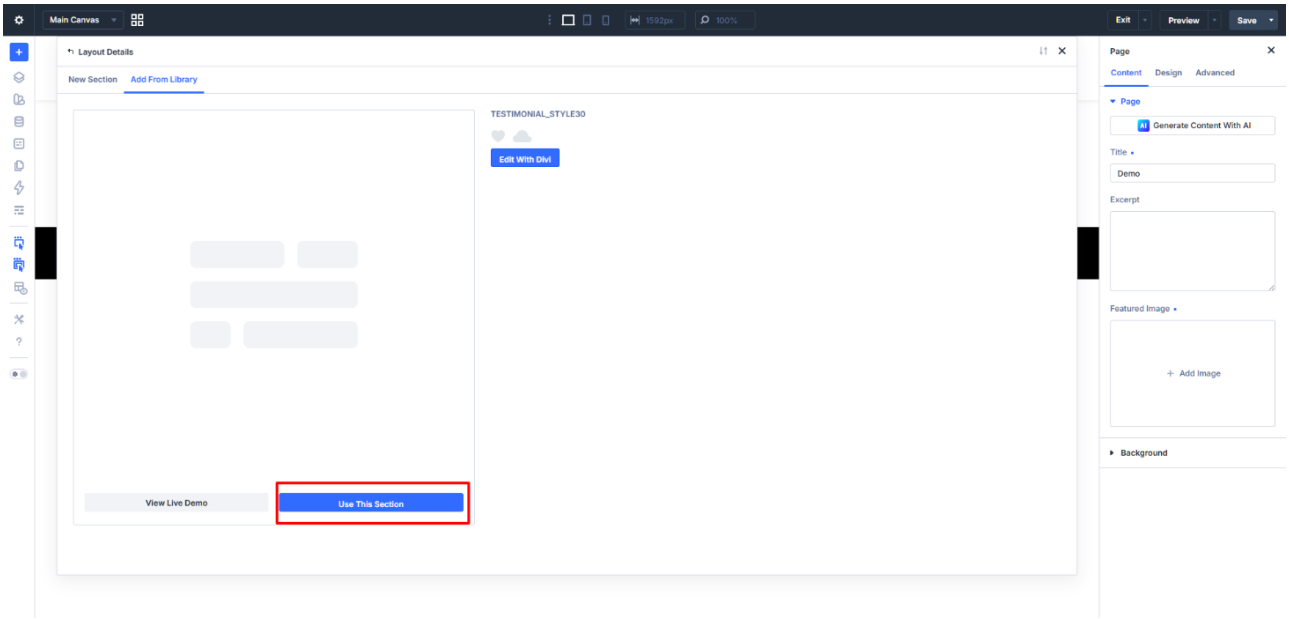

Step 7:

Navigate to **Add From Library** Tab & select the style you want from the available list. After that select section style that you want to use **wait for style to load** .

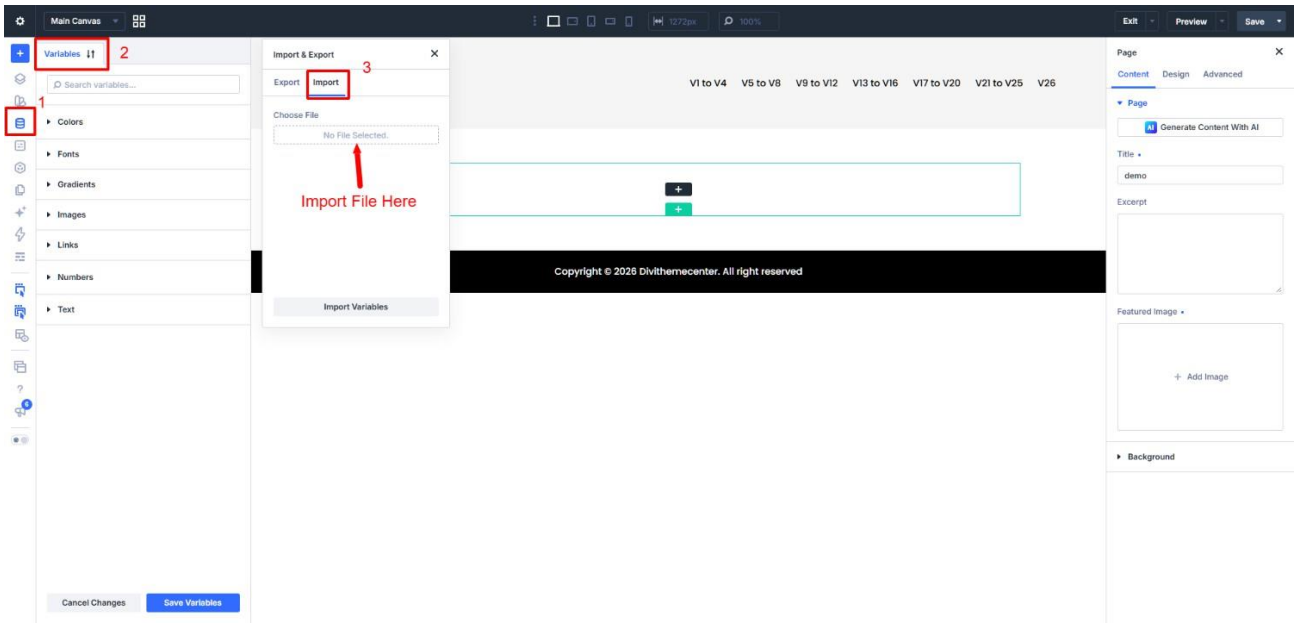

Step 8:

We have provided **' All_Variables '** file which is available under supplementary folder to apply global setting across the layout and is mandatory if you want apply variables like **Color setting, Font family, Font size , Text, Images, Links, Gradients**, etc as per our demo

If **' All_Variable '** is not provided can skip this step

Go to Variable Manager -> Click on Variables -> Import -> Import Your File

Step 9:(Optional)

Note :-
1. This step is applicable for layout pack that need either ‘ **Blog or Portfolio** ‘ sections imported , and for the rest all ‘ **Images Will Be Included In the Json File Provided** ‘ **.**

2. This step is only needed for our ‘ **Blog or Portfolio Module Pack** ‘ and that too if end user need load ‘ **Our Dummy Data** ‘ else can skip this step.

If you are importing **For Portfolio or Blog UI Module Pack** on the fresh divi installation you might need import **Project, Media, and Posts XML** – that is you need import / load **Dummy Data** on your website. You can find **XML** files needed under **Supplementary Zip.**

Step : For **XML** files you need to import it under **Tools -> Import -> WordPress Import.** You can **skip this step** if your site already have **Demo Data** added or loaded in WordPress Admin.

One Who Have Purchased From Elegant Themes Marketplace Might Need To Use Their Own Demo Data
